NAVJOT SINGH

navjotaroundai@gmail.com | +91-7070152218 | LinkedIn | GitHub | Medium | Quora

PROFESSIONAL SUMMARY

Data Analyst skilled in Python, SQL, Power BI, and statistical analysis, experienced in transforming data into actionable business insights. Currently pursuing an MCA in Machine Learning & AI, with interests in predictive analytics and business intelligence.

EDUCATION

Master of Computer Applications (Machine Learning & AI) — Chandigarh University **2026 – 2028**
Chandigarh, India **CGPA: 9.40** | Semester 1

Master of Commerce (Accounts & Finance) — RSP College, Jharia **2024 – 2026**
Dhanbad, India **CGPA: 6.50** | Semester 3

Bachelor of Commerce (Accounts & Finance) — Guru Nanak College, Dhanbad **2021 – 2024**
Dhanbad, India **CGPA: 6.47**

TECHNICAL SKILLS

Python: Pandas, NumPy, Matplotlib, Seaborn, Data Cleaning, EDA, ETL **SQL:** MySQL, PostgreSQL, Joins, CTEs, Window Functions, Subqueries, Query Optimization
BI & Visualization: Power BI, DAX, Data Modeling, Matplotlib, Seaborn, Plotly **Statistics:** Descriptive Statistics, Hypothesis Testing, Forecasting, Trend Analysis
Excel & Tools: Advanced Excel, Pivot Tables, VLOOKUP, Data Validation, Reporting Automation, Jupyter, VS Code, Git, GitHub

EXPERIENCE

Data Analyst Associate — DS Vidya **Sep 2026 – Present**
Data Analytics & Reporting

- Perform data analysis, cleaning, and validation using Python and SQL; develop KPI reports and dashboards to support data-driven decisions.
- Document analytical workflows and support research and AI-related analytics projects.

Research Scholar — DS Vidya **Aug 2025 – 2026**
Data Science & AI Hub

- Analyzed **20,000+ records** using Python, SQL, and Excel; developed Power BI dashboards, improving reporting efficiency by **35%**.
- Optimized data cleaning and validation workflows, improving processing efficiency by **15%**; applied statistical analysis and forecasting.

Accounting Intern — Gara Industries **Jan 2025 – Jun 2025**
Finance & Reporting

- Audited **500+ financial records** and prepared reconciliation reports, reducing reporting errors by **20%**.

PROJECTS

LUCA — Last Universal Common Ancestor *Ongoing*

- Developing an end-to-end bioinformatics workflow to consolidate LUCA reconstruction datasets and analyze protein consensus, posterior probabilities, metabolic completeness, and cross-study agreement.
- Applying Python/Pandas, MySQL/SQL, statistics, feature engineering, and Power BI to build a reproducible analytical layer and research dashboard.

QuickBite Express — Crisis Recovery & Business Intelligence Analytics **GitHub**

- Analyzed **8 relational datasets** using Python, MySQL, and Power BI to diagnose the 2025 business crisis.
- Compared pre-crisis vs. crisis performance, identifying a **69.78% order decline**, **52.09% increase in delivery time**, rising cancellations/SLA breaches, and high-value customer risk; translated findings into recovery priorities.

Election Intelligence Analytics — Tamil Nadu Assembly Elections **GitHub**

- Built a Python–MySQL–Power BI workflow comparing **2021 vs. 2026** constituency-level election data across three datasets.
- Used SQL CTEs, window functions, joins, and comparative analysis to identify regional shifts, winner flips, and party vote-share patterns, then presented the results through interactive BI storytelling.

AirPure Innovations — Air Pollution Business Intelligence **GitHub**

- Integrated **4 real-world datasets** covering AQI, health, vehicle growth, and population using Python/Pandas for cleaning, EDA, correlation, and severity analysis.
- Identified pollution hotspots, seasonal trends, health-impact patterns, and demand drivers; developed market-opportunity analysis to support air-purifier business decisions.
